INVEST IN THE POWER BEHIND AN ENERGY REVOLUTION

BATT is a portfolio of companies generating significant revenue from the development, production and use of lithium battery technology, including: 1) battery storage solutions, 2) battery metals & materials, and 3) electric vehicles. BATT seeks investment results that correspond generally to the EQM Lithium & Battery Technology Index.

REASONS TO INVEST

- 1 Growing Global Opportunity:** The lithium-ion battery market is expected to grow from an estimated \$44.2 billion in 2020 to \$94.4 billion by 2025, a compound annual growth rate (CAGR) of 16.4%.¹
- 2 Multiple Drivers of Demand:** A number of factors continue to fuel growth in lithium-ion batteries, including continued demand for mobile devices, electric vehicle adoption, and a rising need for energy storage solutions.
- 3 Access** to this theme in the convenience and transparency of the ETF structure.

Carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information can be found in the Fund's statutory and summary prospectuses, which may be obtained at amplifyetfs.com. Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. The Fund is not actively managed. The Fund invests in securities included in its Index regardless of their investment merit. Narrowly focused investments typically exhibit high volatility. A portfolio concentrated

in a single industry, such as lithium battery technology, makes it vulnerable to factors affecting the companies may be subject to greater price volatility than investments in other types of companies.

The Fund will invest in the securities of non-U.S. companies. Investments in emerging market issuers are subject to a greater risk of loss than investments in issuers located or operating in more developed markets. The mining, refining and/or manufacturing of metals may be significantly affected by regulatory action and changes in governments. Small and/or mid-capitalization companies may be more vulnerable

to adverse general market or economic developments. Electric vehicle technology is relatively new and is subject to risks associated with a developing industry.
