AMPLIFY ETF TRUST

SUPPLEMENT DATED JUNE 13, 2023 TO THE PROSPECTUS AND SUMMARY PROSPECTUS, EACH DATED FEBRUARY 28, 2023

AMPLIFY ONLINE RETAIL ETF
(the “Fund”)

IMPORTANT NOTICE REGARDING CHANGES IN THE FUND’S PRINCIPAL INVESTMENT STRATEGIES

This Supplement updates certain information in the Fund’s Summary Prospectus and Prospectus, which take effect on or about July 16, 2023.

1. Notwithstanding anything to the contrary in the Summary Prospectus and Prospectus, the second, third and fourth paragraphs under the Section entitled “Principal Investment Strategies” are hereby deleted in their entirety and replaced with the following:

The Index. The Index seeks to measure the performance of global equity securities of publicly traded companies with significant revenue from the online retail business. The Index methodology is designed to result in a portfolio that has the potential for capital appreciation. The Adviser and Sub-Adviser believe that companies with significant online retail revenues may be best positioned to take advantage of growth in online retail sales and shoppers versus companies with less significant online retail revenues. Eligible constituents must operate in one of four online retail business segments: traditional online retail; online travel; online marketplace; and omnichannel retail (i.e. retail that integrates digital and physical components, including buy online/pickup in store, curbside delivery, ship from store and mobile payment in store), subject to weighting limits and other restrictions, as described below.

Index Methodology. The universe of global equity securities eligible for inclusion in the Index begins with domestic and foreign common stocks (including depositary receipts) listed on a regulated stock exchange, in the form of shares tradable for non-U.S. investors without restrictions, that exhibit adequate liquidity and accessibility in the view of the Index Provider. Eligible constituents must have a market capitalization of at least $300 million, a minimum price at the time of purchase of $5 per share, and a six-month daily average value traded of at least $2 million to be included in the Index. In addition, all securities must also have an Altman Z-Score, which predicts the probability of a company filing for bankruptcy in the next 2 years, that is greater than or equal to 2 at the time of inclusion (the higher the score that a company receives, the lower the probability of bankruptcy). All securities comprising the Index from traditional online retail, online travel or online marketplace activities must be issued by companies deriving at least 70% of their revenues or a minimum of $100 billion in annual retail sales and, with respect to omnichannel retail with a physical presence, online sales must represent at least 10% of total annual retail sales and more than $2 billion in revenue. Further, securities from omnichannel retailers must exhibit positive year-over-year same store sales growth. As of
June 1, 2023, the Index included securities of 61 companies, of which approximately 47.5% were small-cap or mid-cap companies.

*Weighting of Underlying Securities.* Index constituents are weighted approximately equally, such that constituents within the omnichannel retailer segment do not exceed 10% of the Index and the U.S.-domiciled constituents equal at least 75% of the Index. The Index is rebalanced semi-annually but may be adjusted more frequently for specific corporate events. For more information regarding the Index, please see the section entitled “Index Information.”

2. Notwithstanding anything to the contrary in the Summary Prospectus and Prospectus, the following risk is added as the fifth risk under “Principal Risks of Investing in the Fund” and the fifth risk under “Fund Investments – Principal Risks of Investing in the Fund”:

**Consumer Staples Companies Risk.** The Fund invests in consumer staples companies. Consumer staples companies provide products directly to the consumer that are typically considered non-discretionary items based on consumer purchasing habits. Such products include food, beverages, household items and tobacco. Consumer staples companies may be affected by the regulation of various product components and production methods, new laws, regulations or litigation, marketing campaigns, competitive pricing and other factors affecting consumer demand. Changes in the worldwide economy, demographics, consumer preferences and/or spending, exploration and production spending may adversely affect these companies, as well as natural and man-made disasters, political, social or labor unrest, world events and economic conditions. Price competition among suppliers may also be very challenging, which can drive prices lower and impact returns.

3. Notwithstanding anything to the contrary in the Summary Prospectus and Prospectus, the first, second and third paragraphs under the Section entitled “Index Information – Index Methodology” are hereby deleted in their entirety and replaced with the following:

**The Index.** The Index seeks to measure the performance of global equity securities of publicly traded companies with significant revenue from the online retail business. The Index methodology is designed to result in a portfolio that has the potential for capital appreciation. The Adviser and Sub-Adviser believe that companies with significant online retail revenues may be best positioned to take advantage of growth in online retail sales and shoppers versus companies with less significant online retail revenues. Eligible constituents must operate in one of four online retail business segments: traditional online retail; online travel; online marketplace; and omnichannel retail (*i.e.* retail that integrates digital and physical components, including buy online/pickup in store, curbside delivery, ship from store and mobile payment in store), subject to weighting limits and other restrictions, as described below.

**Index Methodology.** The universe of global equity securities eligible for inclusion in the Index begins with domestic and foreign common stocks (including depositary receipts) listed on a regulated stock exchange, in the form of shares tradable for non-U.S. investors without restrictions, that exhibit adequate liquidity and accessibility in the view of the
Index Provider. Eligible constituents must have a market capitalization of at least $300 million, a minimum price at the time of purchase of $5 per share, and a six-month daily average value traded of at least $2 million to be included in the Index. In addition, all securities must also have an Altman Z-Score, which predicts the probability of a company filing for bankruptcy in the next 2 years, that is greater than or equal to 2 at the time of inclusion (the higher the score that a company receives, the lower the probability of bankruptcy). All securities comprising the Index from traditional online retail, online travel or online marketplace activities must be issued by companies deriving at least 70% of their revenues or a minimum of $100 billion in annual retail sales and, with respect to omnichannel retail with a physical presence, online sales must represent at least 10% of total annual retail sales and more than $2 billion in revenue. Further, securities from omnichannel retailers must exhibit positive year-over-year same store sales growth.

Weighting of Underlying Securities. . Index constituents are weighted approximately equally, such that constituents within the omnichannel retailer segment do not exceed 10% of the Index and the U.S.-domiciled constituents equal at least 75% of the Index. The Index is rebalanced semi-annually, but may be adjusted more frequently for specific corporate events. Following the announcement by an issuer of an Index constituent of the terms and conditions of a corporate action, the Index Provider determines whether such corporate action has a dilutive, concentrative or similar effect on the price of the respective Index constituent. If this should be the case the Index Provider will make adjustments that are deemed appropriate by the Index Provider in order to take into account the dilutive, concentrative or similar effect and will determine the date on which this adjustment shall come into effect. In addition, if the Index Provider determines that the Index weight of any Index Component is greater than 6% on any review day, then the weight of the Index Component is reduced to 3%. Any excess weight is redistributed equally to the other Index Components that have a weight of less than 6%. This procedure may be done continually until the weight of no Index Component is greater than 6% and the proceeds will be redistributed equally among the other names in the Index in accordance with the normal weighting procedures.

PLEASE RETAIN THIS SUPPLEMENT FOR FUTURE REFERENCE.
INVESTMENT OBJECTIVE

The Amplify Online Retail ETF seeks investment results that generally correspond (before fees and expenses) to the price and yield of the EQM Online Retail Index (the "Index").

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund ("Shares"). You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

<table>
<thead>
<tr>
<th>Description</th>
<th>Expense</th>

<tr>
<td>Distribution and Service (12b-1) Fees</td>
<td>0.00%</td>
</tr>
<tr>
<td>Other Expenses</td>
<td>0.00%</td>
</tr>
<tr>
<td><strong>Total Annual Fund Operating Expenses</strong></td>
<td><strong>0.65%</strong></td>
</tr>
</tbody>
</table>

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest $10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain at current levels. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

<table>
<thead>

<td>$362</td>
<td>$810</td>
</tr>
</tbody>
</table>

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account. These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. During the fiscal year ended October 31, 2022, the Fund's portfolio turnover rate was 57% of the average value of its portfolio.

PRINCIPAL INVESTMENT STRATEGIES

The Fund invests at least 80% of its net assets (plus borrowings for investment purposes) in global equity securities that comprise the Index, which will primarily include common stocks and/or depositary receipts, such as American Depositary Receipts ("ADRs") and Global Depositary Receipts ("GDRs"). The Fund, using an indexing investment approach, attempts to replicate,
before fees and expenses, the performance of the Index. Penserra Capital Management LLC ("Penserra" or the "Sub-Adviser") serves as investment sub-adviser to the Fund. The Index was created and is maintained by EQM Indexes LLC ("EQM“ or the "Index Provider"). The Index Provider is not affiliated with the Fund, Amplify Investments LLC ("Amplify Investments“ or the "Adviser") or the Sub-Adviser.

The Index. The Index seeks to measure the performance of global equity securities of publicly traded companies with significant revenue from the online retail business. The Index methodology is designed to result in a portfolio that has the potential for capital appreciation. The Adviser and Sub-Adviser believe that companies with significant online retail revenues may be best positioned to take advantage of growth in online retail sales and shoppers versus companies with less significant online retail revenues. Eligible constituents derive at least 70% of revenues or $100 billion in retail sales from online and/or virtual business transactions (as opposed to brick and mortar and/or in-store transactions) in one of three online retail business segments: traditional online retail; online travel; and online marketplace.

Index Methodology. The universe of global equity securities eligible for inclusion in the Index begins with domestic and foreign common stocks (including depositary receipts) listed on a regulated stock exchange, in the form of shares tradable for non-U.S. investors without restrictions, that exhibit adequate liquidity and accessibility in the view of the Index Provider. Eligible constituents must have a market capitalization of at least $300 million, a minimum price at the time of purchase of $5 per share, and a six-month daily average value traded of at least $2 million to be included in the Index. All securities comprising the Index must be issued by companies deriving at least 70% of their revenues or a minimum of $100 billion in annual retail sales from traditional online retail, online travel or online marketplace activities. The Index is comprised of a basket of global equity securities, as adjusted, with at least 75% of such securities issued by U.S.-based companies, as described below. As of February 1, 2023, the Index included securities of 57 companies, of which approximately 55.8% were small-cap or mid-cap companies.

Weighting of Underlying Securities. Index constituents are divided into two pools, as determined by a company’s country of domicile: U.S.-based companies and international-based companies. Index constituents are weighted approximately equally within their respective pools, such that the U.S.-based pool equals at least 75% of the Index. The Index is rebalanced semi-annually but may be adjusted more frequently for specific corporate events. For more information regarding the Index, please see the section entitled “Index Information.”

Diversification Status. The Fund is classified as “diversified” under the Investment Company Act of 1940, as amended (the “1940 Act”).

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund’s investment objective will be achieved. The principal risks are presented in alphabetical order to facilitate finding particular risks and comparing them with other funds. Each risk summarized below is considered a “principal risk” of investing in the Fund, regardless of the order in which it appears.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund’s net asset value. Securities, including the Shares, are subject to market fluctuations and liquidity constraints that may be caused by such factors as economic, political, or regulatory developments, changes in interest rates, and/or perceived trends in securities prices. Shares of the Fund could decline in value or underperform other investments.

Authorized Participant Concentration Risk. Only an authorized participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that act as authorized participants on an agency basis (i.e. on behalf of other market participants). To the extent that these institutions exit the business or are unable to proceed with creation and/or redemption orders with respect to the Fund and no other authorized participant is able to step forward to create or redeem, in either of these cases, Shares may trade at a discount to the Fund’s net asset value and possibly face delisting.

Concentration Risk. In following its methodology, the Index from time to time may be concentrated to a significant degree in securities of issuers located in a single industry or sector. To the extent that the Index concentrates in the securities of issuers in a particular industry or sector, the Fund will also concentrate its investments to approximately the same extent. By concentrating its investments in an industry or sector, the Fund may face more risks than if it were diversified broadly over numerous industries or sectors.

Consumer Discretionary Companies Risk. The Fund invests in consumer discretionary companies, which are companies that provide non-essential goods and services, such as retailers, media companies and consumer services. These companies manufacture products and provide discretionary services directly to the consumer, and the success of these companies is tied closely to the performance of the overall domestic and international economy, interest rates, competition and consumer confidence. Success depends heavily on disposable household income and consumer spending. Changes in demographics and consumer tastes can also affect the demand for, and success of, consumer discretionary products in the marketplace.

Currency Risk. Because the Fund’s net asset value is determined in U.S. dollars, the Fund’s net asset value could decline if a relevant foreign currency depreciates against the U.S. dollar or if there are delays or limits on the repatriation of such currency. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the Fund’s net asset value may change without warning, which could have a significant negative impact on the Fund.
Cyber Security Risk. The Fund is susceptible to operational risks through breaches in cyber security. A breach in cyber security refers to both intentional and unintentional events that may cause the Fund to lose proprietary information, suffer data corruption or lose operational capacity. Such events could cause the Fund to incur regulatory penalties, reputational damage, additional compliance costs associated with corrective measures and/or financial loss. Cyber security breaches may involve unauthorized access to the Fund’s digital information systems through “hacking” or malicious software coding, but may also result from outside attacks such as denial-of-service attacks through efforts to make network services unavailable to intended users. In addition, cyber security breaches of the Fund’s third-party service providers, such as its administrator, transfer agent, custodian, or sub-adviser, as applicable, or issuers in which the Fund invests, can also subject the Fund to many of the same risks associated with direct cyber security breaches. While the Fund has established business continuity plans and risk management systems designed to reduce the risks associated with cyber security, there are inherent limitations in such plans and systems. Additionally, there is no guarantee that such efforts will succeed, especially because the Fund does not directly control the cyber security systems of issuers or third-party service providers.

Depositary Receipts Risk. Depositary receipts may be subject to some of the same risks as direct investment in foreign companies, which includes international trade, currency, political, regulatory and diplomatic risks. Under an unsponsored depositary receipt arrangement, the foreign issuer assumes no obligations and the depositary’s transaction fees are paid directly by the depositary receipt holders. Because unsponsored depositary receipt arrangements are organized independently and without the cooperation of the issuer of the underlying securities, available information concerning the foreign issuer may not be as current as for sponsored depositary receipt and voting rights with respect to the deposited securities are not passed through. Depositary receipts can involve currency risk since, unlike depositary receipts, they may not be U.S. dollar-denominated.

Emerging Markets Risk. Emerging market countries include, but are not limited to, those considered to be developing by the International Monetary Fund, the World Bank, the International Finance Corporation or one of the leading global investment banks. The majority of these countries are likely to be located in Asia, Latin America, the Middle East, Central and Eastern Europe, and Africa. Investments in emerging market issuers are subject to a greater risk of loss than investments in issuers located or operating in more developed markets. This is due to, among other things, the potential for greater market volatility, lower trading volume, higher levels of inflation, political and economic instability, greater risk of a market shutdown and more governmental limitations on foreign investments in emerging market countries than are typically found in more developed markets. Moreover, emerging markets often have less uniformity in accounting and reporting requirements, less reliable securities valuations and greater risks associated with custody of securities than developed markets. In addition, emerging markets often have greater risk of capital controls through such measures as taxes or interest rate control than developed markets. Certain emerging market countries may also lack the infrastructure necessary to attract large amounts of foreign trade and investment.

Equity Securities Risk. The value of the Shares will fluctuate with changes in the value of the equity securities in which it invests. Equity securities prices fluctuate for several reasons, including changes in investors’ perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Index Provider Risk. The Fund seeks to achieve returns that generally correspond, before fees and expenses, to the performance of the Index, as published by their Index Provider. There is no assurance that the Index Provider will compile the Index accurately, or that the Index will be determined, composed or calculated accurately. While the Index Provider gives descriptions of what the Index is designed to achieve, the Index Provider does not provide any warranty or accept any liability in relation to the quality, accuracy or completeness of data in its indices, and it does not guarantee that its Index will be in line with its methodology.

Inflation Risk. Inflation may reduce the intrinsic value of increases in the value of the Fund. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the value of the Fund’s assets can decline as can the value of the Fund’s distributions.

Information Technology Companies Risk. Information technology companies are generally subject to the following risks: rapidly changing technologies; short product life cycles; fierce competition; aggressive pricing and reduced profit margins; the loss of patent, copyright and trademark protections; cyclical market patterns; evolving industry standards; and frequent new product introductions. Information technology companies may be smaller and less experienced companies, with limited product lines, markets or financial resources and fewer experienced management or marketing personnel. Information technology company stocks, especially those which are internet related, have experienced extreme price and volume fluctuations that are often unrelated to their operating performance.

Internet Companies Risk. Internet companies are subject to rapid changes in technology, worldwide competition, rapid obsolescence of products and services, loss of patent protections, cyclical market patterns, evolving industry standards, frequent new product introductions and the considerable risk of owning small capitalization companies that have recently begun operations. In addition, the stocks of many internet companies have exceptionally high price-to-earnings ratios with little or no earnings histories. Many internet companies have experienced extreme price and volume fluctuations that often have been unrelated to their operating performance.

Market Maker Risk. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund’s net asset value and the price at which the Shares are trading on the Exchange, which could result in a decrease in value of the Shares. In addition, decisions by market makers or authorized participants to reduce their role or step
away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. This reduced effectiveness could result in Shares trading at a discount to net asset value and also in greater than normal intra-day bid-ask spreads for Shares.

**Market Risk.** Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value, including the possible loss of the entire principal amount that you invest. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices, and changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility. Overall security values could decline generally or could underperform other investments. In addition, local, regional or global events such as war, acts of terrorism, spread of infectious diseases or other public health issues, recessions, or other events could have a significant negative impact on the Fund and its investments. For example, the COVID-19 pandemic and efforts to contain its spread resulted in extreme volatility in the financial markets. While the development of vaccines has slowed the spread of the disease, there is no guarantee that the vaccines will be effective against emerging variants of the disease. As the global pandemic illustrated, such events may affect certain regions, sectors and industries more significantly than others. Such events could also adversely affect the prices and liquidity of the Fund's portfolio securities or other instruments and could result in disruptions to trading markets. Any of such circumstances could materially negatively impact the value of the Fund's Shares and result in increased market volatility. During any such events, the Fund's Shares may trade at an increased premium or discount to its NAV.

**Non-Correlation Risk.** The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. Although the Fund currently intends to seek to fully replicate the Index, the Fund may use a representative sampling approach, which may cause the Fund not to be as well-correlated with the return of the Index as would be the case if the Fund purchased all of the securities in the Index in the proportions represented in the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

**Non-U.S. Investment Risk.** Securities issued by non-U.S. companies present risks beyond those of securities of U.S. issuers. Risks of investing in the securities of non-U.S. companies include: different accounting standards; expropriation, nationalization or other adverse political or economic developments; currency devaluation, blockages or transfer restrictions; changes in foreign currency exchange rates; taxes; restrictions on non-U.S. investments and exchange of securities; and less government supervision and regulation of issuers in non-U.S. countries. Prices of non-U.S. securities also may be more volatile.

**Online Retail Risk.** Companies that operate in the online marketplace, retail and travel segments are subject to fluctuating consumer demand. Unlike traditional brick and mortar retailers, online marketplaces and retailers must assume shipping costs or pass such costs to consumers. Consumer access to price information for the same or similar products may cause companies that operate in the online marketplace, retail and travel segments to reduce profit margins in order to compete. Profit margins in the travel industry are particularly sensitive to seasonal demand, fuel costs and consumer perception of various risks associated with travel to various destinations. Due to the nature of their business models, companies that operate in the online marketplace, retail and travel segments may also be subject to heightened cybersecurity risk, including the risk of theft or damage to vital hardware, software and information systems. The loss or public dissemination of sensitive customer information or other proprietary data may negatively affect the financial performance of such companies to a greater extent than traditional brick and mortar retailers. As a result of such companies being web-based and the fact that they process, store, and transmit large amounts of data, including personal information, for their customers, failure to prevent or mitigate data loss or other security breaches, including breaches of vendors' technology and systems, could expose companies that operate in the online marketplace, retail and travel segments or their customers to a risk of loss or misuse of such information, adversely affect their operating results, result in litigation or potential liability, and otherwise harm their businesses.

**Operational Risk.** The Fund is exposed to operational risks arising from a number of factors, including, but not limited to, human error, processing and communication errors, errors of the Fund's service providers, counterparties or other third-parties, failed or inadequate processes and technology or systems failures. The Fund, Adviser and Sub-Adviser seek to reduce these operational risks through controls and procedures. However, these measures do not address every possible risk and may be inadequate to address these risks.

**Passive Investment Risk.** The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. The Fund generally will not attempt to take defensive positions in declining markets.

**Premium/Discount Risk.** The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with change in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below (discount), at or above (premium) their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time.

**Smaller Companies Risk.** Small and/or mid-capitalization companies may be more vulnerable to adverse general market or economic developments, and their securities may be less liquid and may experience greater price volatility than larger, more established companies as a result of several factors, including limited trading volumes, products or financial resources,
management inexperience and less publicly available information. Accordingly, such companies are generally subject to greater market risk than larger, more established companies.

**Trading Issues Risk.** Although the Shares of the Fund are listed for trading on the Exchange, there can be no assurance that an active trading market for such Shares will develop or be maintained. Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. The Fund may have difficulty maintaining its listing on the Exchange in the event the Fund’s assets are small or the Fund does not have enough shareholders.

**Valuation Risk.** During periods of reduced market liquidity or in the absence of readily available market quotations for the holdings of the Fund, the ability of the Fund to value its investments will become more difficult. In market environments where there is reduced availability of reliable objective pricing data, the judgment of the Fund’s investment adviser in determining the fair value of the security may play a greater role. While such determinations may be made in good faith, it may nevertheless be more difficult for the Fund to accurately assign a daily value.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

**PERFORMANCE**

The bar chart and table below illustrate the annual calendar year returns of the Fund based on NAV as well as the average annual Fund and Index returns. The bar chart and table provide an indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year-to-year and by showing how the Fund’s average annual total returns based on NAV compare to those of the Index and a broad-based market index. The Fund’s performance information is accessible on the Fund’s website at www.amplifyetfs.com.

The Fund’s highest quarterly return was 68.62% (quarter ended June 30, 2020) and the Fund’s lowest quarterly return was -36.11% (quarter ended June 30, 2022).

**Average Annual Total Return as of December 31, 2022**

The Fund’s past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future.

Returns before taxes do not reflect the effects of any income or capital gains taxes. All after-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of any state or local tax. Returns after taxes on distributions reflect the taxed return on the payment of dividends and capital gains.

Your own actual after-tax returns will depend on your specific tax situation and may differ from what is shown here. After-tax returns are not relevant to investors who hold Shares in tax-deferred accounts such as individual retirement accounts (IRAs) or employee-sponsored retirement plans.

**MANAGEMENT OF THE FUND**

**Investment Adviser.** Amplify Investments LLC.

**Sub-Adviser.** Penserra Capital Management LLC.

**Portfolio Managers.** The following individuals serve as portfolio managers to the Fund.

- Dustin Lewellyn, CFA, Chief Investment Officer at Penserra
- Ernesto Tong, CFA, Managing Director at Penserra
- Anand Desai, Senior Vice President at Penserra

The portfolio managers are primarily and jointly responsible for the day-to-day management of the Fund. Each portfolio manager has served as part of the portfolio management team of the Fund since its inception in 2016.
PURCHASE AND SALE OF SHARES
The Fund issues and redeems Shares at net asset value ("NAV") only with authorized participants ("APs") that have entered into agreements with the Fund’s distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may only be bought and sold in the secondary market (i.e., on a national securities exchange) through a broker or dealer at a market price. Because the Shares trade at market prices rather than NAV, Shares may trade at a price greater than NAV (at a premium), at NAV, or less than NAV (at a discount). An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase Shares (bid) and the lowest price a seller is willing to accept for Shares (ask) when buying or selling shares in the secondary market (the "bid-ask spread").

Recent information, including information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is available online at www.amplifyetfs.com.

TAX INFORMATION
The Fund’s distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES
If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and Foreside Fund Services, LLC, the Fund’s distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
