

Innovative Companies & Crypto Assets Fueling Tokenization

TKNQ tracks a professionally constructed index that blends equities and cryptocurrencies shaping the new tokenization economy. By targeting companies and crypto assets with significant tokenization-driven revenue, innovation, or infrastructure impact, TKNQ aims to provide a streamlined, high-conviction approach to participating in this emerging digital asset frontier. The Fund seeks investment results that closely correspond (before fees and expenses) to the performance of the MarketVector™ Tokenization Technology Index.

Reasons to Invest

Trillion-Dollar Transformation: The tokenized assets are projected to grow from \$176 billion to over \$3.6 trillion by 2030, driven by adoption from major financial institutions and regulatory tailwinds.¹

Infrastructure for the Digitization of All Assets: Tokenization connects real-world assets to digital platforms, enabling ownership verification, fractional investing, faster settlements, and broader access to traditionally hard-to-trade assets—enhancing liquidity, accessibility, and efficiency.

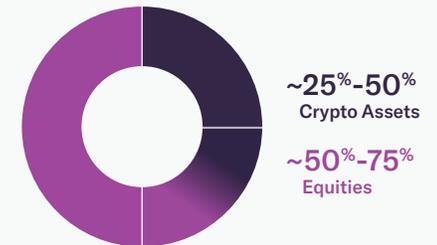

Diversified Exposure to Tokenization Ecosystem: TKNQ provides equity and digital asset exposure to companies, blockchains, platforms and infrastructure providers driving tokenization across financial services, artificial intelligence, and next generation digital ecosystems.

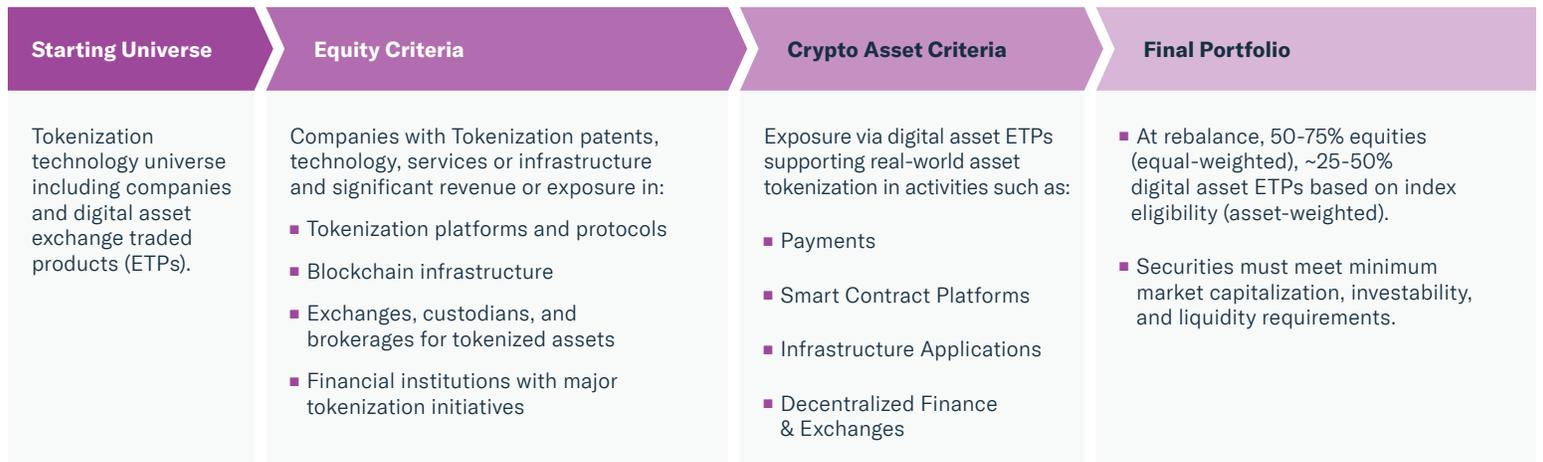

The Fund does not invest directly in digital assets.

MarketVector Tokenization Technology Index Methodology

Tokenization allows real-world assets like real estate, stocks, and bonds to be represented as digital tokens on a blockchain network.

TOKENIZATION VS TRADITIONAL ASSETS

Feature	Tokenized Assets	Traditional Assets
Settlement	Near-instant	Days to weeks
Accessibility	Greater accessibility and fractional ownership opportunities	Limited
Transparency	Public, blockchain-based	Opaque, requires intermediaries
Liquidity	Greater liquidity	Restricted
Transaction Costs	Lower transaction costs and cost savings	High
Costs	Reduced with blockchain efficiency	High due to multiple middlemen

Past performance is no guarantee of future results.

Carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information can be found in the Fund's statutory and summary prospectuses, which may be obtained at AmplifyETFs.com. Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. There is no guarantee the investment strategy will be successful. The Fund is considered to be non-diversified. The Fund employs a "passive management" or indexing investment approach that

seeks investment results that correspond (before fees and expenses) generally to the performance of its underlying index.

Investments focused on tokenization and digital assets are more volatile than broadly diversified portfolios. Tokenization technology may not deliver expected returns and faces risks such as theft, cybersecurity, competition, and regulatory uncertainty. The Fund may invest in foreign securities, which carry additional risks.

The Fund may have indirect exposure to cryptocurrencies through other investment vehicles but does not invest directly in Bitcoin, Ethereum, XRP, or Solana. Cryptocurrency investments are highly speculative, subject to extreme volatility, and uncertain tax treatment.

The Fund's return may not match or achieve a high degree of correlation with the return of the Index. To the extent the Fund utilizes a sampling approach, it may experience tracking error to a greater extent than if the Fund had sought to replicate the Index.

The MarketVector™ Tokenization Technology Index is a rules-based index comprised of companies and exchange-traded products (ETPs) that are engaged in the growth, commercialization, and broader proliferation of tokenization.
