

Three Strategies. Three Markets. One Established Approach to Growth and Income.

Actively managed, built on a tactical covered call¹ strategy, and designed to deliver three sources of total return:

Capital Appreciation
from carefully selected
equity holdings.

Dividend Income
from high-quality
dividend-paying stocks.

Option Premium Income
from selling covered call
options to generate income.

By implementing carefully crafted options strategies this suite of investment solutions is designed to balance attractive monthly income with long-term capital appreciation, all in pursuit of compelling total return.

Discover how our specialized strategies can help you amplify your investment portfolio at AmplifyETFs.com/YieldSmart-ETFs

¹A covered call refers to a financial transaction in which the investor selling call options owns an equivalent amount of the underlying security.

Carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information can be found in the Fund's statutory and summary prospectuses, which may be obtained at AmplifyETFs.com. Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

Covered call risk is the risk that the Fund will forgo, during the option's life, the opportunity to profit from increases in the market value of the

security covering the call option above the sum of the premium and the strike price of the call, but has retained the risk of loss should the price of the underlying security decline.

Small and/or mid-capitalization companies may be more vulnerable to adverse general market or economic developments, and their securities may be less liquid and may experience greater price volatility than larger, more established companies. Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.
