

AMPLIFIED FIXED INCOME

Built to Enhance Yield with Covered Calls

Amplify's Fixed Income Covered Call ETFs seek to deliver high targeted income and attractive total return potential by combining diversified bond exposure with a systematic weekly covered call strategy. By writing options more frequently, these strategies aim to generate consistent income while maintaining participation in underlying fixed income markets.

Why Combine Covered Calls with Fixed Income?

Traditional fixed income alone may fall short of income expectations: adding covered calls aims to enhance income potential while maintaining diversified bond exposure.

For illustrative purposes only. Not intended to represent any investment.

Total Return Approach

Target Income Strategy

 Interest income from the underlying bond exposure

Option premium income

Capital Appreciation Strategy

 Upside potential from shares not covered by calls

Targeted Income Across the Fixed Income Spectrum

Weekly Covered Calls for a Monthly Distribution Frequency

	Target Income Annually	Underlying Exposure	Portfolio Opportunity
TLTP	12%+	U.S. Treasuries	High Income + rate-sensitive diversification
LQDM	12%	Investment Grade Corporate Bonds	High income + high-quality diversification
HYGM	10%	High Yield Corporate Bonds	High income + diversified credit exposure

Target income (LQDM, HYGM) or target option premium (TLTP) may not be achieved, and income may be significantly below that level during any one-year period if NAV remains level or declines. Distributions are not guaranteed.

Why Weekly Covered Calls on Fixed Income?

4x More Frequent Income Opportunities

Weekly options seek to collect premium up to four times more frequently than monthly strategies, allowing strike prices and coverage to adjust more quickly to market changes.

Compounded Income Potential

More frequent premium collection may support consistent income generation over time.

Risk Aware Income Generation

Option premiums may help buffer volatility while maintaining exposure to underlying bonds.

Designed for Attractive Total Return

A portion of the portfolio typically remains uncovered, allowing for upside participation.

These ETFs are built for income oriented investors also seeking compelling total return potential.

The Bloomberg U.S. High Yield Corporate Bond 10% Income Covered Call Index is designed to provide exposure to U.S. dollar denominated high yield corporate bonds and generate 10% income through interest payments and option premiums. The Bloomberg U.S. Investment Grade Corporate Bond 12% Income Covered Call Index is designed to provide exposure to U.S. investment grade corporate bonds and generate 12% income through interest payments and option premiums. Bloomberg U.S. Treasury 20+ Year 12% Premium Covered Call 2.0 Index is designed to provide a targeted annualized option premium income of 12% through writing weekly covered call options.

Carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information can be found in the Fund's statutory and summary prospectuses, which may be obtained at [AmplifyETFs.com](https://www.amplifyetfs.com). Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or

premium to NAV and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

There is no guarantee that the Funds will meet their investment objectives. The Funds are not actively managed and the Fund's return may not match or achieve a high degree of correlation with the return of the Indexes. The Funds are non diversified and may be concentrated, which can increase volatility. The Funds are subject to market risk, interest rate risk, inflation risk, credit risk, and underlying funds risk. LQDM has risks associated with corporate bonds and high yield securities. HYGM has risks associated with high yield corporate bonds and high yield securities. TLTP is subject to U.S. Treasury Securities Risk. Rising interest rates generally reduce the value of fixed income investments.

Covered call strategies may limit upside potential while still exposing the Funds to downside risk. Covered puts can incur substantial losses if the underlying asset rises sharply, with premiums offering limited protection. The use of FLEX Options and other derivatives involves additional risks. Monthly distributions may include return of capital, which lowers the investor's cost basis and could result in higher loss.
