The Secured Overnight Financing Rate (SOFR) is a broad measure of the cost of borrowing cash overnight collateralized by Treasury securities.\(^1\)

**SECURED OVERNIGHT FINANCING RATES (SOFR) 2023 YTD**

- The SOFR YTD average is 5.00%\(^2\)
- The Secured Overnight Financing Rate has historically been higher than most money market options.

Past performance does not guarantee future results. There is no assurance that SOFR will perform in a similar way as other more established rates would have performed at any time. SOFR is a relatively new reference rate not yet been widely implemented and may be more volatile than other benchmark rates.\(^2\)

**SOFR is a secured rate**

Collateralized by high quality U.S. Treasuries
SOFR ATTRIBUTES

SOFR reflects the short-term cost of borrowing money using Treasury debt as collateral

Calculated based on actual transactions from the previous business day

The rate is published daily, before market open, by the New York Fed

Relies on repurchase (REPO) agreements backed by Treasuries

Represents a broad market that averages transaction volumes greater than $1 trillion per day

Large, diverse set of participants including asset managers, banks, broker-dealers, insurance companies, money market funds, pension funds, etc.

Averages more than $1 trillion in underlying transaction volume per day

Past performance does not guarantee future results. There is no assurance that SOFR will perform in a similar way as other more established rates would have performed at any time. SOFR is a relatively new reference rate not yet been widely implemented and may be more volatile than other benchmark rates. Data estimates as of 10/31/2023.
A repurchase agreement (REPO) is a short-term agreement to sell securities and buy them back at a higher price. Repos often function as short-term, collateral-backed, interest-bearing loans.

Repos aim to provide secured funding for the lender and liquidity for the borrower.

The repo rate is the short-term loan's interest rate and is the difference between the initial sale price and the repurchase price.
SOF is designed to closely replicate the performance of SOFR after fees and expenses, as published by the Federal Reserve Bank of New York. SOF is actively managed and aimed at providing current monthly income while reducing duration risk.

- SOFR Monthly income potential after fees and expenses
- Reduced risk by limiting duration exposure

First US ETF Aimed to Make Closely Watched SOFR Yield Easily Accessible to Retail Investors.

Carefully consider the Fund’s investment objectives, risks, charges and expenses before investing. This and other information can be found in the Fund's statutory and summary prospectus, which may be obtained at AmplifyETFs.com. Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. You could lose money by investing in the Fund. There can be no assurance that the Fund’s investment objectives will be achieved. The Fund is new with limited history to evaluate. There is no assurance that SOFR, or rates derived from SOFR, will perform in the same or similar way as other more established rates would have performed at any time. The Fund’s use of financial instruments involving counterparties, including swap arrangements, involves risks that are different from those associated with ordinary portfolio securities transactions. The Fund expects to invest principally in repos (Repurchase Agreements). If the seller fails to repurchase the security and the market value of the security declines, the Fund may lose money.

There is risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. The Fund may hold certain investments that may trade over-the-counter, trade in limited volume, or lack an active trading market. The Fund is subject to management risk because it is an actively managed portfolio. The Fund currently has fewer assets than larger funds, and like other new funds, large inflows and outflows may impact the Fund’s market exposure for limited periods of time. Because the Fund is non-diversified, it can invest a greater portion of its assets in securities of individual issuers so that changes in the market value could cause greater fluctuations in Share price than would occur in a diversified fund.

Amplify Investments LLC is the Investment Adviser to the Fund, and Samsung Asset Management (New York), Inc. serves as the Investment Sub-Adviser.

Amplify ETFs are distributed by Foreside Fund Services, LLC.
