Changes to Fund's Principal Risks:

The fund will add the below risk to its “Principal Risks” section: FLEX Options Risk. The Fund may utilize FLEX Options issued and guaranteed for settlement by the OCC. The Fund bears the risk that the OCC will be unable or unwilling to perform its obligations under the FLEX Options contracts. In the unlikely event that the OCC becomes insolvent or is otherwise unable to meet its settlement obligations, the Fund could suffer significant losses. Additionally, FLEX Options may be less liquid than certain other securities, such as standardized options. In less liquid markets for the FLEX Options, the Fund may have difficulty closing out certain FLEX Options positions at desired times and prices. In connection with

the creation and redemption of Shares, to the extent market participants are not willing or able to enter into FLEX Option transactions with the Fund at prices that reflect the market price of the Shares, the Fund's NAV and, in turn the share price of the Fund, could be negatively impacted. The value of the FLEX Options held by the Fund will be determined based on market quotations or other recognized pricing methods. The value of FLEX Options will be affected by, among others, changes in the value of the reference asset, changes in interest rates, changes in the actual and implied volatility of the reference asset and the remaining time to until the FLEX Options expire.
