Explore Solana with Options

Amplify ETFs™

Designed to offer investors appreciation potential and the opportunity to harness SOL's price volatility for consistent monthly income.

The Amplify Solana 3% Monthly Option Income ETF seeks to harness SOL's price volatility to generate regular, high monthly income, all while maintaining the potential for significant price upside. This innovative strategy systematically writes covered calls on Solana ETPs* or related assets.

SOL is the native cryptocurrency of Solana, a high-performance blockchain built for speed, scalability, and low-cost transactions. Every action on the Solana network requires SOL cryptocurrency, reinforcing its role as both a utility token and high potential digital asset.

Key Growth Drivers

Solana has gained recognition as the leading revenue-generating blockchain.

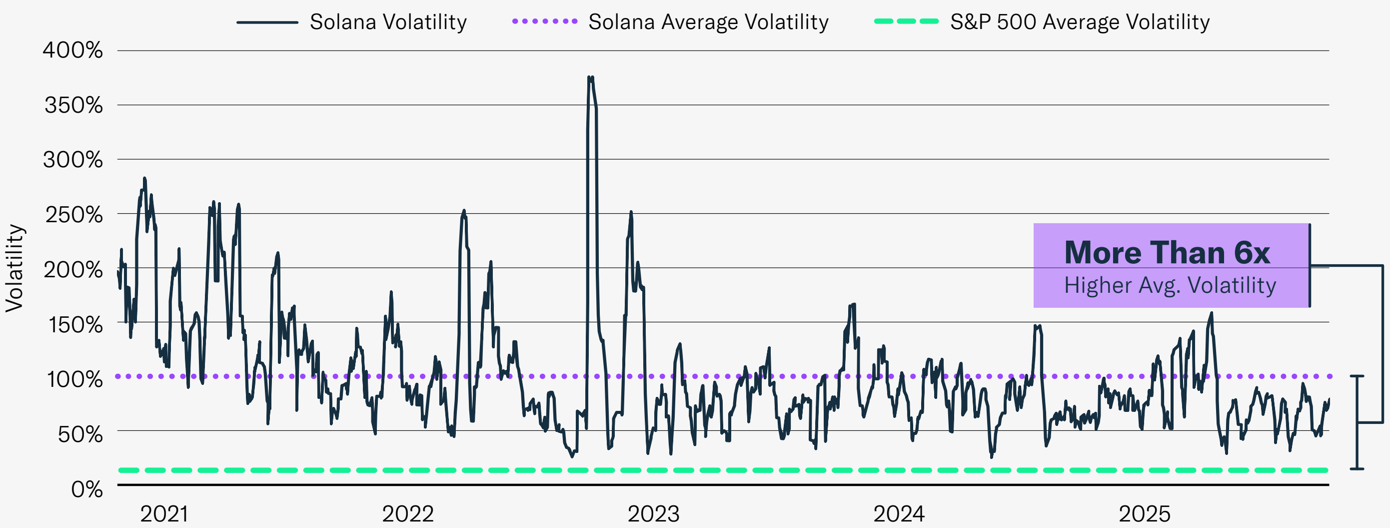
- Accelerating institutional & retail adoption, including large institutional partnerships
- Impressive performance: high speed, scalability, and low-transaction costs
- Rising prominence in smart contracts, stablecoins, DeFi (decentralized finance) and tokenization

Transforming Volatility into an Income Opportunity

SOL's notable price movements present a unique advantage when paired with a covered call strategy. By leveraging volatility, investors can generate regular premium earnings while still retaining exposure to SOL's growth. Whether SOL trends upward, downward, or remains range-bound, investors may benefit from resilient income, transforming volatility into opportunity.

The chart shows SOL's volatility relative to the S&P 500. A higher level of volatility has historically resulted in a higher level of potential option premium received in a covered call strategy.

SOL PRICE VOLATILITY



Past performance is no guarantee of future results. *1/8/2021-9/30/25. The S&P500 index tracks the performance of 500 leading US companies. The Bloomberg Solana index is designed to measure the performance of a Solana token in USD. Volatility is the annualized standard deviation of the relative price change for the 10 most recent trading days closing price, expressed as a percentage.*

SOL Price Exposure & Potential for Optimized Returns with Income Generation

SOLM aims to offer dual advantages: exposure to SOL's price movements and high income generation potential through option writing. Solana has gained recognition as the top revenue generating blockchain, meanwhile major financial institutions are partnering with Solana for tokenization, payment settlement, and stablecoin solutions. Every action on the Solana network requires SOL, giving SOL enticing growth potential due to its status as a utility token (needed to use the Solana network), and an investment asset with upside potential. We believe our covered call approach offers a balanced pathway to compelling total returns by combining capital appreciation and high monthly income.

Diversification

Including SOL exposure in an income allocation may provide diversification benefits. As a non-traditional asset, its price movements have historically been less correlated with traditional income assets and those of stocks or bonds.

Built-in Risk Mitigation

These covered call strategies may provide a layer of downside risk mitigation through the premiums collected from sold call options, acting as a buffer against potential declines in SOL's value.

Access to Professionally Managed Strategies

Executing covered call options requires expertise, time, and precision. With SOLM, investors gain entry to professionally managed options strategies, streamlining the income generation potential without the complexities of direct management.

Amplify ETFs are at the forefront of deploying covered call strategies across a variety of asset classes and now SOLM offers an investment approach that is carefully designed to optimize income generation, manage risks, and provide SOL price exposure.

Amplify Solana 3% Monthly Option Income ETF

Visit **SOLM-ETF.com**

The Funds do not invest directly in SOL. Solana ETPs are Solana exchange traded products.

Carefully consider the Fund's investment objectives, risks, charges, and expenses before investing. This and other information can be found in the Fund's statutory and summary prospectuses, which may be obtained at AmplifyETFs.com. Read the prospectus carefully before investing.

Investing involves risk, including the possible loss of principal. Shares of any ETF are bought and sold at market price (not NAV), may trade at a discount or premium to NAV and are not individually redeemed from the Fund. Brokerage commissions will reduce returns.

The annualized option premium may be significantly higher or lower than the stated range. There is no guarantee the investment strategy will be successful. The Fund is considered to be non-diversified. The Fund is actively managed and its performance reflects the investment decisions that the Adviser makes for the Fund.

The Fund is exposed to significant risks through investments in SOL via Solana ETPs, Futures, and Options. SOL is a highly speculative asset with a volatile market subject to rapid shifts, regulatory uncertainty, and adoption challenges. Issues such as slow transaction speeds, variable fees, and price swings amplify these risks.

Digital asset regulation remains unsettled, and trading of Solana ETP shares on U.S. exchanges may be halted due to market conditions or exchange discretion. Option prices are volatile and influenced by the underlying asset, interest and currency rates, and expected volatility –all shaped by political and economic policies. FLEX Options may be less liquid than standardized options, making timely exits difficult.

Covered call strategies may limit upside potential while still exposing the Fund to downside risk. Covered puts can incur substantial losses if the underlying asset rises sharply, with premiums offering limited protection. Monthly distributions may include return of capital, which lowers the investor's cost basis and could result in higher future taxes upon sale –even if shares are sold at a loss.

Amplify Investments LLC serves as the investment adviser to the Fund. Kelly Strategic Management, LLC and Penserra Capital Management LLC each serve as investment sub-advisers to the Fund.

Amplify ETFs are distributed by Foreside Fund Services, LLC.
